Mead-- I understand there may be a meeting in Casper convened by the State later this month. They may have more details.

As for the status of sampling, EPA coordinated with USGS, the tribes, and the State of Wyoming to resample our deep monitoring wells in Pavillion in April. The purpose of the sampling was to gather more information about the groundwater and provide additional data for consideration by a peer-review panel that will review EPA's draft report issued last December. EPA also separately resampled nearby domestic wells. Samples have been sent to laboratories for analysis and will be subject to a quality assurance review before being compiled into summary reports. We expect data reports from EPA and USGS will be available and posted online by this fall. These data will also be made available to the peer reviewers to consider as they review EPA's draft report.

Hi Rich,

I'm working on a story for today about the cisterns to be installed for people in the Pavillion area.

Could you please provide a quick update on the testing out there, and anything else new?

Thanks,

Mead
